Can an outburst help predict the next one?

Figure and build review preview. Scientific prose is not yet drafted. Barry W. Brook (University of Tasmania), with Claude Opus 5.5 (Anthropic) and GPT-6 Codex (OpenAI). Draft of 2026-11-09; a plain-language summary of a living research repository, https://github.com/BWBrook/dwarf-nova-memory.

The puzzle

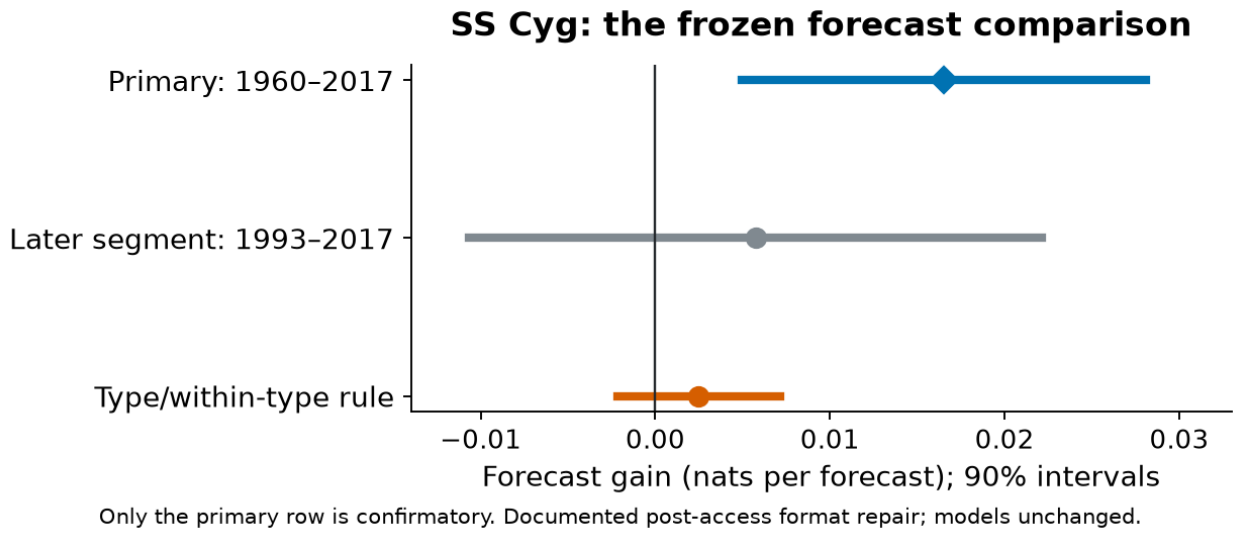

Figure. The primary forecast comparison gained 0.0165 log-score units per forecast; its interval is above zero. The later years and the frozen long/short rule remain inconclusive. This retrospective result followed a documented format repair after data access, and does not establish physical memory.

Why it is hard
