A One example forecast: frozen distributions, conditioned once on survival to issue
Frozen timing-only (M2)
Frozen timing + duration (M3)
0.603
0.577
onset interval that
scored the forecast
30 days
Probability that the next onset
has occurred by this wait
Days from forecast issue (JD 2436989.5)
B Gain in each six-year block of the held-out period (441 forecasts)
1960–1965 (n=53)
1966–1971 (n=49)
1972–1977 (n=50)
1978–1983 (n=46)
1984–1989 (n=43)
1990–1995 (n=39)
1996–2001 (n=43)
2002–2007 (n=46)
2008–2013 (n=41)
2014–2017 (n=31)
Six-year block
pooled mean 0.0165
90% interval 0.0049 to 0.0281
Mean gain, timing + duration minus timing-only (nats per forecast)
